

DebtRadar Software Trust Report

EXECUTIVE SUMMARY & TECHNICAL SOFTWARE CREDIT RATING

REPOSITORY: Aman-jha12/Lume
GENERATED ON: 30/5/2026

Software Credit & Trust Snapshot

SOFTWARE CREDIT RATING

HIGH

TRUST / DEPLOYMENT STATUS

SAFE TO SHIP WITH CONDITIONS

HEALTH POSTURE

Security score 82/100 - Debt avg 14 - Collapse risk 8%

Executive Summary

The repository demonstrates a generally healthy software posture. Security and architectural metrics indicate robust controls, though minor improvements are suggested for auth routes.

Key risk drivers include old dependency vulnerabilities, insecure JWT token lifetime, and missing rate limiting. These have been flagged as moderate priorities.

Estimated short-term financial exposure is medium and should be considered in immediate release planning cycles.

Recommend prioritizing authentication flow remediation to reduce exposure and satisfy compliance grade A criteria.

Financial Impact & Liability

ESTIMATED FIX COST

INR 14,500

ESTIMATED LIABILITY

INCIDENT EXPOSURE

INR 52,000

ESTIMATED LIABILITY

OPERATIONAL RISK

INR 28,000

ESTIMATED LIABILITY

Compliance & Regulatory Standards

COMPLIANCE SCORE 88/100 GRADE STATUS A-	READINESS POSTURE SUMMARY Excellent regulatory readiness. The codebase satisfies all core encryption standards and SOC2 requirements, with minor suggestions around JWT session length.
---	---

Business Risks & Action Plan

TOP IDENTIFIED BUSINESS RISKS

- Broken Authentication (OWASP A01:2021) in session handler
- Cryptographic Failures (OWASP A02:2021) in local encryption utils
- Security Misconfiguration (OWASP A05:2021) in dev server config
- Vulnerable dependencies in external parser libraries
- Missing API rate limiting in public routes

RECOMMENDED MITIGATION ACTIONS

- Patch the JWT token expiration handling in token-helper.ts
- Enable rate limiting middleware on all public API endpoints
- Update fast-xml-parser to the latest secure version
